

# COE MANUFACTURING

## Don't Let Obsolete Technology Rob You of Valuable Production Time!

**STD, Multi-bus and PDP Controls are extremely limited!  
Replacing with VME Technology TODAY ensures production without interruption!**

Supplies for STD, Multi-bus and PDP Controls for your Lathe line are near to extinction. Coe's ability to service your equipment will be severely impacted when these components are no longer available.

This older technology is being replaced industry wide by newer, VME-based technology. All software development by Coe Manufacturing utilizes this industry standard. Requirements to find quicker and more cost-efficient methods of production fuel this technological transition. It is Coe's responsibility to provide you with the necessary tools and equipment to obtain the highest return on your investment. An upgrade package is available that will support your Lathe Line operation while producing a significant return on your investment as you make the transition to the VME-based Controls technology.

VME available for . . .

- Computerized Chargers
- Core Drives
- "Big" Roller Bars
- Vertical Height Adjustment
- Electronic Pitch Rails

- Most current electronic hardware available
- Increased Lathe Production
- Improve Block Positioning Accuracy
- Reduced Thickness Variation
- Improved Veneer Recovery
- Enhanced Internal Diagnostics and Fault List
- Modular design Allows for Operation with any Combination of Above Machines
- Continued development of Software Applications
- Improved Serviceability
